

VETERINARY HEALTH CERTIFICATE

EXPORT OF DAY-OLD POULTRY / HATCHING EGGS TO THE UNITED STATES OF AMERICA

OWNER: _____

ADDRESS: _____

PURCHASER: _____

ADDRESS: _____

MEANS OF TRANSPORTATION: _____

REGION OF EXPORT: _____

REASONS FOR EXPORT: ☐ HATCHING ☐ BREEDING ☐ SLAUGHTER ☐ OTHER

This is to certify:

Each flock and hatchery from which the shipment described below originated was inspected within the past thirty (30) days (except where the flock of origin is in the USA) and as a result of a careful examination by a veterinarian of the poultry premises, no evidence of Newcastle disease or any communicable disease of poultry was found nor, insofar as it has been possible to determine, were the poultry in the flock of origin or hatchery exposed to any such disease during the ninety (90)* days immediately prior to the inspection date. Newcastle disease, fowl plague or highly pathogenic avian influenza has not occurred on the premises of origin, nor on any adjoining premises during the ninety (90)* day period preceding exportation and the area where the premises is located has not been under quarantine for any poultry disease during the preceding ninety (90)* days. Poultry/hatching eggs covered by this certificate do not originate from flocks nor had contact with any birds or poultry originating in a control zone established by federal animal health authorities due to outbreaks of Newcastle disease or Highly Pathogenic Avian Influenza (HPAI). In the case of commercial poultry, the flock of origin participates in a pullorum eradication program recognized by the veterinary officials of Canada. The flock of origin has participated in a pullorum eradication program recognized by the veterinary officials of Canada.

* For HPAI, this time frame is reduced to 28 days.

The flock of origin of the day-old chicks or hatching eggs have been maintained in the region from which they are offered for exportation for at least ninety (90) days immediately preceding the date of export.

The day old birds and the flock of origin of the day-olds/hatching eggs have not been vaccinated with a vaccine for any H5 or H7 subtype of avian influenza, nor have originated from a zone under restriction for HPAI.

The flock of origin has been vaccinated against Newcastle Disease (avian paramyxovirus) at least 21 days prior to export, using vaccines that do not contain any velogenic strains of Newcastle virus or the flock was not vaccinated. Please indicate status. _____

The exporter has been advised that shipment must be made in new, clean containers or appropriately sanitized packaging materials at the premises from which the birds/hatching eggs were to be exported.

For purposes of certification for entry into the United States of America, poultry is defined as chickens, ducks, geese, swans, turkeys, doves, pheasants, grouse partridges, quail, guinea fowl, pea fowl and pigeons.
